

Purohith Connect — Effort, Credits & Timeline Estimate

Production-ready marketplace for verified priests · Shared MongoDB backend for Web (PWA) + Mobile (React Native) · Prepared for Founder

Guiding principle: One backend, one database, two clients. The existing FastAPI + MongoDB APIs become the single source of truth. The current React PWA and a new React Native mobile app both consume the same versioned `/api/v1` endpoints. A customer who books on web sees the same booking, priest, invoice and chat on mobile — exactly like Amazon / Flipkart.

1. Architecture (E-commerce Grade)

Backend (shared)

- FastAPI + MongoDB (already in place)
- Versioned REST APIs (`/api/v1/*`)
- JWT access + refresh tokens (web & mobile parity)
- Object storage for ID proofs, photos, invoices
- Push notifications (FCM) + WhatsApp + Email
- Razorpay live + webhooks + refunds
- Search index (text + filters + geo)
- Rate limiting, audit log, Sentry error tracking

Clients (thin, DB-shared)

- **Web PWA** — React + Tailwind (already built, mobile-responsive)
- **Mobile app** — React Native (Expo) with shared design tokens & API client
- Same user account, cart, bookings, wallet on both
- Deep links + universal links for WhatsApp / SMS
- Offline booking cart & last-viewed poojas

2. Feature Inventory & Status

Module	Feature	Status	Notes
Auth & Profiles	Phone OTP login (mocked)	DONE	Swap to MSG91 / Twilio for live
	JWT + refresh tokens (mobile-ready)	P1	Refactor for RN parity
	Priest onboarding & verification	DONE	ID upload pending storage
	Admin approve / suspend	DONE	
Marketplace	Pooja catalog + search + filters	P1	Add price, language, area, rating filters
	Priest listing with reviews	DONE	
	Cart & multi-pooja booking	P1	New — e-commerce style
	Coupons / promo codes	P2	

Module	Feature	Status	Notes
	Wishlist / favourites	P2	
Booking	Calendar & availability	DONE	
	Address + Google Maps live	P1	Currently Leaflet
	Booking status timeline	DONE	
	Reschedule / cancel policy	P1	
Payments	Razorpay checkout (mock)	DONE	
	Live Razorpay + webhooks	P1	
	Refunds & partial refunds	P1	
	GST-compliant invoices (PDF)	P1	
Notifications	WhatsApp updates (mock)	DONE	
	Twilio WhatsApp live + templates	P1	
	Push notifications (FCM) for mobile	P2	
Priest App	Job feed & accept/reject	DONE	
	Earnings & payout dashboard	P2	
	Automated payouts (Razorpay X)	P2	
Admin	Priest verification queue	DONE	
	Analytics dashboard (GMV, cohorts)	P2	
	Dispute & refund console	P2	
AI	Help-me-choose pooja (Gemini)	DONE	Uses Emergent LLM key
	AI muhurta / date suggester	P2	Bonus
Mobile App	React Native (Expo) shared codebase	P2	iOS + Android
	App Store + Play Store submission	P2	
	OTA updates (Expo EAS)	P3	
Compliance	T&C, Privacy, Refund, GST reg.	P1	

3. Timeline & Effort (Solo build with Emergent E1)

Phase	Scope	Working days	Calendar weeks
Phase 1 DONE	MVP with mocks — 3 portals, AI, PWA, landing, PDFs	— (shipped)	—
Phase 2A	File storage + live OTP + live Razorpay + Google Maps + Twilio WhatsApp	6–8 d	1.5–2 w
Phase 2B	Cart, coupons, GST invoices, refunds, cancellation policy, search filters	6–8 d	1.5–2 w
Phase 3	Priest earnings dashboard, auto-payouts, admin analytics, dispute console	5–7 d	1.5–2 w
Phase 4	React Native mobile app (Expo) — Customer + Priest, shared API, push, deep links	10–14 d	2.5–3.5 w
Phase 5	Store submission, compliance, T&C, monitoring, load test, go-live	3–5 d	1 w
Total remaining	Web hardening + Mobile app + Go-live	30–42 d	7.5–10.5 w

4. Credit Estimate (Emergent E1)

Credits are consumed per tool call / build iteration. Below are realistic ranges based on scope size, integration difficulty and testing loops. Ranges intentionally include a ~20% buffer for bug-fix loops and user-review iterations.

Phase	What you get	Credits (low)	Credits (high)
2A · Live integrations	File storage, MSG91 OTP, Razorpay live + webhooks, Google Maps, Twilio WhatsApp	180	260
2B · E-commerce features	Cart, coupons, GST invoices, refunds, cancel policy, filters, wishlist	160	230
3 · Priest & Admin ops	Earnings, auto-payout (Razorpay X), analytics, dispute console, moderation	140	210
4 · React Native mobile app	Expo project, shared API client, both apps (customer + priest), push notifications, deep links, offline cart	300	450
5 · Launch hardening	Store metadata, compliance pages, Sentry, load test, docs	70	110
Total remaining	Web-grade production + Mobile app + Launch	850	1,260

Recommended budget: plan for **~1,100 credits** to reach full production with mobile app. Split as **~600** for Phases 2A + 2B + 3 (web) and **~500** for Phase 4 + 5 (mobile + launch). If you want to ship only the *web live cutover* first (skip mobile), budget **~500 credits over 3–4 weeks**.

5. Third-party Costs (outside Emergent credits)

These are paid directly to the providers — Emergent does not resell them.

Service	Purpose	Monthly (₹, indicative)
MSG91 / Twilio OTP SMS	OTP login	₹0.15–0.30 / SMS
Twilio WhatsApp Business	Booking updates	₹0.40–0.80 / message
Razorpay	Payments	2% + GST per txn
Razorpay X / Payouts	Priest payouts	₹5 flat / payout
Google Maps Platform	Places, Geocoding, Distance	\$200 free / month, then usage-based
Object storage	ID proofs, photos, invoices	Included via Emergent playbook (no extra key)
Apple Developer	iOS store	\$99 / year
Google Play	Android store	\$25 one-time
Domain + SSL	purohithconnect.com	Already owned
Emergent LLM key (AI assistant)	Gemini/GPT for pooja advisor	Usage-based, auto top-up

6. Working Assumptions

- You continue on Emergent E1 with a single main developer (me) + you as the product owner.
- Scope is Karnataka-first, English + Kannada + Sanskrit UI, Shubh Karyas only.
- Mobile app uses **React Native (Expo)** so ~85% of business logic and API client are reused from the PWA.
- Same MongoDB collections (`users` , `priests` , `bookings` , `reviews` , `payments` , `invoices`) power both web and mobile — no data silos.
- Ranges include reasonable QA loops via the testing agent. Very large scope changes mid-build will push estimates up.

7. Recommended Rollout Order

1. **Week 1–2:** File storage → Live Razorpay → Live OTP → Google Maps → Twilio WhatsApp.
2. **Week 3–4:** Cart, GST invoices, coupons, refunds, cancellation policy.
3. **Week 5–6:** Priest earnings + payouts, admin analytics, dispute console.

4. **Week 7–9:** React Native app (customer + priest) reusing same APIs + push notifications.

5. **Week 10:** Store submission, T&C, launch checklist, monitoring, go-live .

Document version 1.0 · Prepared by Emergent E1 for Purohith Connect · Bangalore, Karnataka · Live at
purohithconnect.com

Credits and days are estimates; actuals depend on scope changes, integration approval times (Razorpay KYC, WhatsApp templates, App Store review) and QA iteration count.
