

■ Purohith Connect

End-to-End User Flow Guide · Customer & Priest

A complete step-by-step walkthrough of how devotees and purohitas will use the Purohith Connect platform — from first login to post-pooja reviews.

Environment	URL
Production	https://pooja-marketplace-3.emergent.host
Preview (dev)	https://pooja-marketplace-3.preview.emergentagent.com

Policy: Purohith Connect performs **only Shubh Karyas** — auspicious ceremonies. We do NOT arrange pitru karya, tarpana, shraddha or antyeshti rituals.

Part 1 · Customer Flow

■■■■■■■■ ■■■■■■■■ · Devotee Booking a Pooja

Step 1 · Land on the website

URL: /

Sees the hero ("Sacred rituals, delivered to your doorstep") with Sri Hanuman guardian background, rotating Sanskrit mantra strip, Sri Manjunatha Swamy grace card, pooja catalog, testimonials, muhurta calendar, FAQ.

Step 2 · Sign in (Phone OTP)

URL: /login

Toggle set to 'I need a Pooja'. Enter 10-digit phone → tap Send OTP. In DEV mode the OTP is shown on-screen in a saffron box. Enter 6-digit code → Verify. Backend: POST /api/auth/otp/request then /verify. Result: JWT stored, user routed to /app.

Step 3 · Customer home

URL: /app

Kannada greeting ■■■■■■■■■■ + user name. 'Blessing of the day' card rotates through 8 deities (Ganesha, Shiva, Rama, Hanuman, Durga, Sharada, Lakshmi, Vishnu). 'Ask Pandit-ji AI' banner. Bento grid of 10 poojas with ■ prices. Bottom nav: Home · Bookings · Ask AI · Profile.

Step 4a · Browse poojas directly

URL: /app/priests?pooja=satyanarayan

Tap any pooja card → see list of verified priests with photo, rating, experience, languages, service areas. Filter chips: Area + Language. Backend: GET /api/priests?pooja=&area=&language=

Step 4b · Or ask Pandit-ji AI

URL: /app/ai

Multi-turn Gemini-powered chat. Opens with '■■■■■■■■■' greeting. Asks about occasion → recommends Shubh Karyas with duration + price + mantra. Politely refuses pitru karya / antyeshti requests. Backend: POST /api/ai/chat.

Step 5 · Priest detail page

URL: /app/priests/:id

Bio, service areas, languages, poojas performed, recent reviews. Sticky bottom CTA: 'Continue booking'.

Step 6 · Booking flow

URL: /app/book/:priestId?pooja=slug

Single page with: date picker (blocked dates greyed), time slot dropdown, address textarea, landmark, Leaflet map (tap to drop pin), notes. Sticky pay bar. Confirm & Pay → creates booking (POST /api/bookings) → auto-simulates Razorpay success (POST /api/bookings/:id/pay). Result: confirmation screen with booking ID and paid amount.

Step 7 · Track bookings

URL: </app/bookings>

List of all bookings with status badge (pending / confirmed / completed / rejected / cancelled). Backend: GET
</api/bookings/customer>.

Step 8 · Post-pooja review

URL: </app/bookings> (completed cards)

'Leave a review' button unlocks when priest marks complete. Modal: 1-5 stars + comment. Backend: POST
</api/reviews> (recomputes priest rating_avg & count).

Step 9 · Profile & Sign out

URL: </app/profile>

Shows name, phone, role. Sign out clears JWT and returns to /.

Part 2 · Priest Flow

■■■■■■■■ ■■■■■■■■ · Purohita Onboarding & Fulfilment

Step 1 · Sign in

URL: `/login?role=priest`

Toggle to 'I'm a Priest'. Phone + optional name → Send OTP → verify. Backend: same `/api/auth/otp/*` with `role='priest'`. If no profile exists, auto-redirect to `/priest/onboarding`.

Step 2 · Onboarding wizard

URL: `/priest/onboarding`

Fields: full name, photo URL, bio, years of experience, languages (Kannada / Sanskrit / Tulu / Telugu / Tamil / English / Marathi / Malayalam), poojas offered (10 checkboxes), service areas (Jayanagara, Whitefield, HSR, Malleshwara + 8 more), ID proof URL. Submit → POST `/api/priest/onboarding` → `verification_status='pending'`.

Step 3 · Priest dashboard (pending)

URL: `/priest`

Yellow 'Verification pending' banner. Stat cards: Pending / Completed / Earnings / Rating. Not yet visible in customer searches.

Step 4 · Admin verifies

URL: `/admin/priests` (admin action)

Admin opens pending priest → clicks Verify. Backend: POST `/api/admin/priests/:id/verify`. Priest immediately becomes discoverable in customer `/priests` listings.

Step 5 · Verified banner

URL: `/priest`

Green 'Verified priest — receiving bookings' banner replaces yellow.

Step 6 · Set availability

URL: `/priest/availability`

Multi-select calendar. Click each date you're UNAVAILABLE → Save. Backend: PATCH `/api/priest/availability`. Customers see those dates disabled.

Step 7 · Booking inbox

URL: `/priest/bookings`

Three sections: Pending / Confirmed / Past. Each card shows pooja, customer name + phone, date/time, full address, landmark, notes.

Step 8 · Accept or decline

POST `/api/bookings/:id/action`

Accept → `status=confirmed`. Decline → modal for reason → `status=rejected` (customer sees the reason).

Step 9 · Perform the pooja

Real world

Purohit arrives with samagri, conducts ritual at scheduled time.

Step 10 · Mark complete

POST /api/bookings/:id/action (action='complete')

Tap 'Mark completed' on confirmed card. Status → completed. Unlocks review flow on customer side.

Step 11 · Earnings & ratings

URL: /priest

Dashboard stats update: total earned = sum of paid+completed. Rating reflects new customer reviews on each completed booking.

Part 3 · Cross-Cutting Flows

Payment (currently MOCKED)

1. Customer taps Confirm & Pay on booking screen → 2. Backend creates booking (payment_status=pending) → 3. Frontend auto-calls /api/bookings/:id/pay → 4. Backend sets payment_status=paid, status=confirmed → 5. Customer sees confirmation.

To go live: swap the mock endpoint for real Razorpay orders.create + Checkout.js (Phase 2, ≈ 2 iterations).

Notifications (in-app only — Phase 1)

Currently uses toast notifications via Sonner. Deferred to Phase 2 via Twilio WhatsApp templates: booking created, booking accepted, 12-hour reminder, completion + review prompt, new booking request (to priest).

Review → Rating loop

Priest marks complete → customer's 'Leave a review' unlocks → customer submits 1–5★ + comment → backend recomputes rating_avg and rating_count on priest profile → future customers see updated rating.

Part 4 · Admin Touchpoints

Screen	Purpose
/admin/login	Email + password login (admin@purohithconnect.in / Admin@Purohith2026)
/admin	Dashboard: bookings, revenue, KYC queue, priest count, customer count
/admin/priests	Tabs Pending / Verified / Rejected — approve or reject with reason
/admin/bookings	Filterable table of every booking across the platform
/admin/poojas	CRUD on Shubh Karya catalog — add, edit, deactivate

Run this exact sequence to verify every flow works:

- [illegible]

Appendix · Backend API Reference

Purpose	Method	Endpoint
Health check	GET	/api/
Request OTP	POST	/api/auth/otp/request
Verify OTP + login	POST	/api/auth/otp/verify
Admin login	POST	/api/auth/admin/login
Current user	GET	/api/auth/me
List poojas	GET	/api/poojas
Single pooja	GET	/api/poojas/:slug
List priests (filter)	GET	/api/priests?pooja=&area=&language=
Priest profile	GET	/api/priests/:id
Priest onboarding	POST	/api/priest/onboarding
My priest profile	GET	/api/priest/me
Update availability	PATCH	/api/priest/availability
Admin list priests	GET	/api/admin/priests?status=
Admin verify priest	POST	/api/admin/priests/:id/verify
Create booking	POST	/api/bookings
Pay (mock Razorpay)	POST	/api/bookings/:id/pay
Customer bookings	GET	/api/bookings/customer
Priest bookings	GET	/api/bookings/priest
Accept/reject/complete	POST	/api/bookings/:id/action
Admin bookings	GET	/api/admin/bookings?status=
Submit review	POST	/api/reviews
Admin stats	GET	/api/admin/stats
Admin catalog CRUD	POST/PATCH/DEL	/api/admin/poojas
AI chat	POST	/api/ai/chat
